### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Geza Ziegler on 06/15/04.

The application has been amended as follows:

#### **In the claims:**

1. (amended) A dryer assembly for drying a liquid ink image formed on a substrate, the assembly comprising:
  - (a) a housing defining a portion of a sheet moving path;
  - (b) a plenum positioned within the housing, the plenum including air flow and outlet means contiguous to the plenum permitting forced air to exit the plenum, the outlet means being in the form of a plurality of [moving] openings **that move relative to the housing and are** adapted to direct flowing air through the openings to the liquid image, the openings moving relative to the image; and
  - (c) a substrate transport device for moving the substrate carrying the liquid ink image through the housing and under the plurality of moving openings so as to quickly dry the liquid ink image.

Cancel claim 5.

18. (amended) An ink jet printing machine for printing a liquid ink image on a sheet of paper moving along a sheet path through a printing zone therein, the ink jet printing machine, comprising:

(a) a frame;

(b) a printhead mounted on the frame and containing liquid ink for depositing a liquid ink image onto the sheet of paper;

(c) a dryer assembly for drying the liquid ink image on the sheet of paper, the dryer assembly including:

(i) a housing defining a portion of the paper sheet moving path;

(ii) a plenum positioned within the housing, the plenum including air flow and an outlet means permitting forced air to exit the plenum, the outlet being in the form of a plurality of [moving] openings **that move relative to the housing and are** adapted to direct flowing air to the liquid image, the openings moving relative to the image;

(iii) a paper sheet transport means for moving the paper carrying the liquid ink image through the housing and under the plurality of moving openings; and

(d) a controller connected to a forced air feeding device

Art Unit: 2853

for controllably blowing air onto the sheet only when there is sheet movement through the housing of the sheet.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Candor et al. (3,592,585) teaches a dryer for sheet-like materials that has a perforated drying belt with openings that move relative to the housing. However, the belt moves at substantially the same speed as the sheet; thus, there would not be any relative motion between the openings and the image.
